

## 2026 Atlantic Canada Cardiovascular Conference

### Overarching ACCC Educational Objectives

**Integrate evolving evidence and guideline-directed strategies into the diagnosis and management of complex cardiovascular conditions across the continuum of care.**

This includes applying contemporary data to decision-making in arrhythmias (e.g., AF anticoagulation), valvular and structural heart disease (e.g., TAVI, Ross procedure, Mitraclip), heart failure, and cardiogenic shock, while recognizing patient selection criteria, procedural indications, and potential complications.

**Enhance clinical decision-making and diagnostic accuracy using advanced imaging and multidisciplinary approaches in challenging or ambiguous cardiovascular presentations.**

This includes optimizing the interpretation and application of echocardiography and other diagnostic modalities, recognizing limitations and discordant findings, and improving collaboration between community and tertiary care to guide appropriate referral, intervention, and longitudinal management.
